

### TRANSPORT POSITION

System shall include two transportable end post assemblies, center spreader bar, competition net, center hold down straps and net tensioning winch. Upright posts shall be constructed of specially designed 3" diameter aluminum extrusion to maximize strength and eliminate rust. Post height shall support the top of the net at official 42" height at the ends. A wheel assembly shall be attached to the upright posts to allow for easy tip and roll movement by two persons. The two end post assemblies shall be connected by 3-piece, 4" square aluminum spreader bar assembly to allow proper net tension without added ballast on each end post. All structural components shall be powder coated dark green. Net shall be official 42' long and 36" tall allowing the top of the net to be official 42" from the playing surface at the posts, and 38" at the center with use of center hold down strap. Net is resting on top of the 4" square spreader bar assembly. System shall meet all applicable rules and specifications, and carry a three-year limited warranty (excluding net).
