V12

The volleyball machine that never misses.

Advanced training device for reception and defense. Precision, repeatability and professional performance — indoor and beach.

01 — WHY THE V12

Hard on the drill, gentle on the ball.

Most ball machines grip the ball with abrasive rubber wheels: after a season of high-volume work the panels are scuffed and the balls are out of rotation. The V12 launches with smooth aluminum rollers instead — the same speed, spin and trajectory all session long, and your match balls come out of it the way they went in.

BALL CARE

Smooth aluminum rollers

No abrasive wheels on the panels. Your match balls keep their grip and stay in rotation for a full season.

REPEATABILITY

The same ball, four hundred times

Set height, speed, interval and shot type once. Every repetition after that is identical, so technical work is measurable.

VOLUME

More reps in the same hour

Reception, defense and serve reading, without interruptions between repetitions — the coach stays free to correct.

ANY COURT

Indoor and beach, no cables

Battery powered, and it breaks down into three parts in 60 seconds — a perfect fit for a car trunk, from the gym to the sand.

ALUMINUM LAUNCH ROLLERS

Four shot types from one screen.

01 **Spin**
Topspin attack and hard-driven balls for defensive work.

02 **Float**
Unpredictable float serves for reception drills.

03 **Reverse spin**
Backspin balls that drop short — dig and platform control.

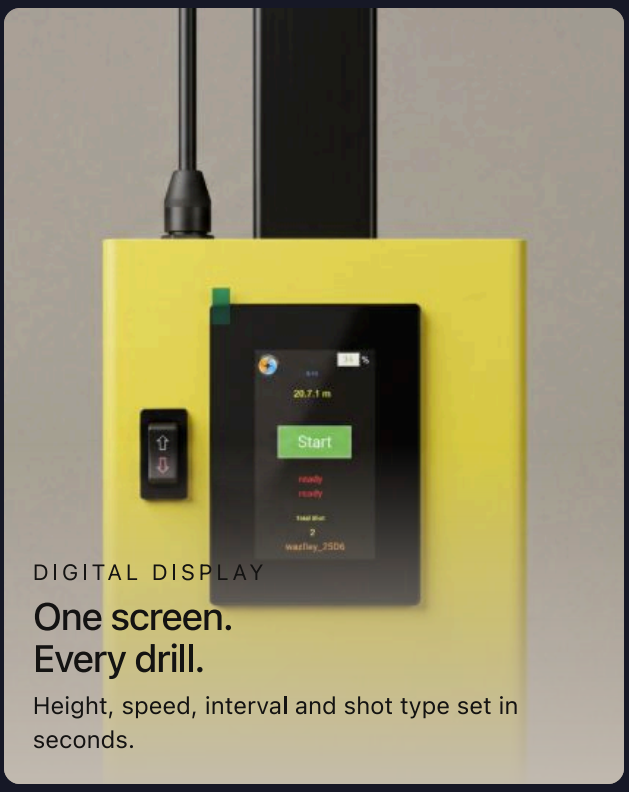

04 **Hybrid**
Mixed sequences that keep players reading rather than anticipating.

EXIT HEIGHT

9 ft 2 in

7 ft 3 in

Adjustable release point, from setter height to serve trajectory.

DIGITAL DISPLAY

**One screen.
Every drill.**

Height, speed, interval and shot type set in seconds.

MAX BALL SPEED

71 mph

SODIUM-ION BATTERY

1000 + cycles

Full recharge in two hours.

SESSION LENGTH

6—7 h

Float serves on one charge. 3—4 h in spin.

03 — TRANSPORT & SPECIFICATIONS

The machine that fits in a car trunk.

Three parts, no tools: assembled or broken down in 60 seconds, and one person loads it alone.

WEIGHT SPLIT · 130 LB TOTAL

Head	44 lb
Body	49 lb
Legs	37 lb
Assembly	60 s, no tools

Max ball speed	71 mph
Shot types	4 · Spin to Hybrid
Exit height	7 ft 3 in — 9 ft 2 in
Total weight	130 lb · 3 parts
Assembly	60 s, no tools
Battery	Sodium-ion, 1000+ cycles
Session length	3—4 h spin · 6—7 h float
Recharge	2 h
Rollers	Smooth aluminum
Use	Indoor · beach
